ABSTRACT:

PURPOSE: To obtain a hairdressing based cosmetic having both light finish and excellent hairdressing power with high safety, by blending an ester compound of a specific cholic acid or derivative with an alcohol, etc., with other ingredients.

CONSTITUTION: A cosmetic obtained by blending an ester compound of a cholic acid expressed by formula I (X1 is formula II or C=O; X2 is CH₂ or formula II; X3 and X4 are CH₂, formula II or C=O) or derivative thereof (e.g., dehydrocholic acid or lithocholic acid) with an 8~22C side-chainlike alcohol (e.g., 2-ethylhexanol or 2,4-dimethylhexanol) and/or oligoester compound and/or an oligoester of the compound expressed by formula I or a derivative thereof with other ingredients. The above-mentioned cosmetic is capable of regulating tackiness thereof by changing ester composition of the cholic acid and effects on mutual bonding of hair can be also taken out by improving the tackiness. Utilization as a hair coating agent for preventing split hair, etc., can be expected.
